

50- Which protocol is commonly used for streaming multimedia content over the internet?

a) HTTP

b) SMTP

c) FTP

d) DNS

Second semester question bank:

1_ In RTCP what CP refers to?

A) canal protocol

B) packet protocol

C) time protocol

D) control protocol

2_ Determine number of packets send in

A) receiver

B) source

C) sender

D) none of them

3_ function of SIP server is

A) Client

B) time management

C) registrar

D) message

4_ SSRC field is bits

A) 32

B) 15

C) 16

D) none of them

5_ In RTP sequence number is bits

A) 15

B) 16

C) 7

D) 32

6_ In VoIP, what does "IP" refer to?

- A) internet provider B) Streaming C) Internet protocol D) interconnected

7_ RTCP attempts to limit its traffic to Session of bandwidth

- A) %5 B) %75 C) %25 D) %2

8_ Which file format is commonly used for storing video in multimedia applications?

- A) JPEG B) MP4 C) GIF D) PNG

9_ Main components of multimedia are

- A) sound B) text C) animation D) All of them

10- what is "QoS" in VOIP networks?

- A) Quality of security B) Differentiated service C) Quality of service D) All of them

11_ bits used for differentiated service code

- A) 6 B) 7 C) 8 D) 9

12_ which of the following used for Traffic management?

- A) time B) per-flow C) class D) out

13- network support for multimedia include.....

- A) Making best effort service B) Differentiated service C) Pre-connection QoS **D) All of them**

14-what does NAT do in the context of VOIP?

- A) Better quality **B) Maps private IP addresses** C) Encrypts voice D) Time cut

15_ SIP uses principle

- A) KISS** B) KIS C) KSS D) SKP

16_ Skype peers with special functions

- A) clients **B) super node** C) overlay D) login server

17- Which component of multimedia deals with visual elements such as images, videos, and animations?

- a) Audio b) Text **c) Graphics** d) Interactivity

18- What is the purpose of a firewall in a multimedia networking application?

- a) To enhance video quality
- b) To regulate network traffic and provide security
- c) To compress multimedia files
- d) To store multimedia content

19- What is streaming stored video?

- a) Live broadcasting of video content
- b) Downloading video content to a device for offline viewing
- c) Continuously playing video content while it's being downloaded
- d) Pausing video playback to buffer content

20- In video streaming, what is buffering?

- a) A feature to rewind and fast forward video
- b) A method to reduce video quality
- c) Storing and preloading a portion of the video to prevent playback interruptions
- d) The process of encoding video for streaming

21- Which of the following is a common challenge in video streaming?

- a) Low latency
- b) Unlimited bandwidth
- c) High cost of content production
- d) Uncompressed video files

22- Which of the following is a popular VoIP application that allows users to make free voice and video calls over the internet?

a) Skype

b) WhatsApp

c) Facebook

d) Twitter

23-Skype peers connect directly to each other for VoIP call called what?

A) clients

B) Super node

C) Overlay network

D) All of them

24-Skype peers with special functions called

A) Super node

B) service

C) Login server

D) P2P

25-Which multimedia networking application is commonly used for remotely controlling and monitoring Internet of Things (IoT) devices?

a) Video conferencing

b) Smart home automation

c) Online gaming

d) Social media

26- Draw RTP header?

*payload
type*

*sequence
number*

*time
stamp*

*Synchronization
Source ID*

Miscellaneous fields

27_ What is RTP packet types?

receiver report packets:

sender report packets:

source description packets:

- write long term for the following:

28-HTTP.....hypertext transfer protocol

29-WWW.....world wide web

30-IP.....internet protocol

31-RTP.....real time protocol

32-VOIP.....voice over IP

33-CBR.....constant bit rate

34-VBR..... Variable bit rate

35-PHB.....per hop behavior

36-RTSP.....real time streaming protocol

37-IP..... internet protocol

38-DSCP.....differentiated service code point

39-What is streaming stored video?

a) Live broadcasting of video content

b) Downloading video content to a device for offline viewing

c) Continuously playing video content while it's being downloaded

d) Pausing video playback to buffer content

40- What is the purpose of adaptive bitrate streaming in video streaming services?

- a) To increase video resolution
- b) To reduce video file size
- c) To adjust video quality based on the viewer's internet speed
- d) To provide subtitles for video content

41- In video streaming, what is buffering?

- a) A feature to rewind and fast forward video
- b) A method to reduce video quality
- c) Storing and preloading a portion of the video to prevent playback interruptions
- d) The process of encoding video for streaming

42- Which of the following is a common challenge in video streaming?

- a) Low latency
- b) Unlimited bandwidth
- c) High cost of content production
- d) Uncompressed video files

43- Which device is commonly used for streaming video content on a TV?

- a) Laptop
- b) Smartphone
- c) Smart TV
- d) Microwave

44- Which of the following is NOT a potential challenge of VoIP?

- a) Reliability during power outages
- b) Call quality affected by network congestion
- c) Limited availability of international calling options
- d) Security concerns such as eavesdropping

45- What is the term for the process of connecting a traditional phone line to a VoIP network?

- a) Analog conversion
- b) Digital transformation
- c) VoIP bridging
- d) VoIP gateway

46- What is the primary challenge in providing network support for multimedia applications?

- a) Ensuring low latency and high bandwidth
- b) Reducing multimedia file sizes
- c) Increasing network security
- d) Enhancing multimedia content quality

47- What is the purpose of a codec in multimedia network support?

- a) To create multimedia content
- b) To design graphical user interfaces
- c) To compress and decompress audio and video data
- d) To route network traffic

48- Which network protocol is used to facilitate real-time video conferencing?

- a) VoIP (Voice over IP)
- b) SMTP (Simple Mail Transfer Protocol)
- c) FTP (File Transfer Protocol)
- d) HTTP (Hypertext Transfer Protocol)

49- What is the primary objective of network support for multimedia applications?

- a) To prioritize text-based content
- b) To maximize network congestion
- c) To provide a seamless and high-quality multimedia experience
- d) To reduce the use of multimedia elements

50- What does SIP stand for in the context of real-time communication protocols?

- a) Secure Internet Protocol
- b) Session Initiation Protocol
- c) Streaming Internet Protocol
- d) System Integration Protocol
